Matthieu Glaisner

Product Manager

matthieu.glaisner@live.fr · +49 176 80042448
Munich, Germany

Product Manager with a background in **engineering, ergonomics, and technical design**, focused on **AI-driven product development** in the **automotive industry**. Experienced in **customer discovery**, **cross-functional collaboration**, and **rapid prototyping** using **AI tools** to translate business needs into actionable product initiatives. **Autonomous, curious, and solution-oriented**, with proven ability to work effectively with international stakeholders across **Europe, Asia, and the USA**. Seeking product roles in **Toulouse, France**, where **AI, technology, and business strategy** intersect.

MAIN TAKEAWAYS — PM

Customer discovery
OEM interviews in **China, Japan, Germany & USA**, in English and German.

Vision & roadmap
Product vision, **roadmap prioritization** and **business plans** for AI/ML initiatives.

Agile delivery
PRDs, backlog prioritization and **Agile/Scrum** in Jira & Confluence.

AI prototyping
Rapid prototypes with **Claude Code & Claude Design** to validate AI product ideas.

TECHNICAL BACKGROUND

Human factors
RAMSIS
Human factors engineering

Software development
GitHub
React
TypeScript
SQL
GitLab
Tailwind CSS

Mechanical engineer
Conception produit
Computing / simulation
CATIA V5
Creo

PROFESSIONAL EXPERIENCE

Product Manager CURRENT
Humanetics · Munich, Germany
Jan 2026 – Present

- Conduct **customer discovery interviews** with international clients (China, Japan, Germany, USA) in English and German to better understand customer needs, market expectations, and product opportunities
- Define **product vision** and contribute to **roadmap prioritization** for new products based on customer feedback, business value, and strategic objectives
- Contribute to the development of **business plans** for new initiatives, particularly around **AI/ML integration** and digital transformation opportunities
- Translate customer and business requirements into structured **Product Requirement Documents (PRDs)** to align stakeholders and guide development teams
- Manage and **prioritize product backlogs** in alignment with roadmap milestones, delivery timelines, and business priorities using **Agile/SCRUM** methodologies
- Support **executive decision-making** by preparing reports, **risk assessments**, and strategic insights on ongoing projects and innovation initiatives
- Anticipate **project risks**, identify dependencies early, and propose **mitigation strategies** to ensure smooth execution and delivery
- Develop **early prototypes using AI tools** (Claude, Claude Code, Claude Design, VS Code, GitLab) to explore, validate, and iterate on new product ideas and AI-driven concepts

Tools: Office 365, Jira, Confluence, Claude, Claude Code, Claude Design, GitLab

Application Engineer — Human Factors & Ergonomics
Humanetics · Munich, Germany
Jul 2023 – Jan 2026

- Performed ergonomics analyses using RAMSIS to support interior concept development with a strong focus on user experience, including reachability, visibility, comfort, accessibility, and driver/passenger positioning
- Designed and developed full-scale digital mock-ups using CATIA V5 advanced surfacing modeling (GSD, Part Design, Assembly Design), based on designer surfaces, packaging constraints, and engineering data
- Contributed to the ergonomics development of the BMW “Neue Klasse” platform, supporting next-generation vehicle interior concepts and user experience studies

Tools: CATIA V5, RAMSIS, Office 365

Technical Designer
ROTAREX · Lintgen, Luxembourg
Apr 2021 – Jul 2023

- Created and updated 3D models and technical drawings for industrial valves
- Managed PLM updates and maintained technical documentation consistency

CAD Designer
Hutchinson · Montargis, France
Jan 2018 – Apr 2021

- Designed thermal management solutions in Creo in collaboration with thermal engineers
- Designed composite aircraft components and produced detailed technical drawings

CAD Design Intern
IFP Energies nouvelles · Rueil-Malmaison, France
Apr 2017 – Dec 2017

- Designed and implemented a fully parametric 3D model of the engine upper assembly
